

## Pump Log

### 2023

6-17 New pump installed

Water table

3-18 1 1/2 '

7-5 6 1/2 '

8-3 4 1/2 '

10-26 Oil changed, pump and hoses drained.

### 2024

4-23 Primed and started. Backplate on pump leaking bad!

Will take apart old pump and see if parts can be used to fix this one.

My guess is that when I drained the pump and then drained the hoses, that some water ran back into the pump housing and then it froze and broke the backplate.

5-7 Repaired pump.

5-8 Installed and tested.

11-8 Pump and hoses drained

### 2025

4-29 Primed and started. Had to dump old tank of gas.

5-7 Replaced broken 1" elbow on underground watering system.

5-23 Used half of the tank and was not running when sprinklers put away.

5-29 Won't start. Skipped watering.

6-5 Plug fouled. Cleaned plug, would run but only on full choke.  
Fuel turnoff did not work. Taking it off of full choke made it very rich, black smoke and trying to die.

6-6 Pump running in am but not pumping any water.

- 6-10 Primed, could not get it to pump any water. Tried both wells independently. Water table at 6 feet.  
Time for a new pump.
- 6-11 New pump installed and tested.
- 6-13 Reported that it ran all night and was still watering in the am.
- 6-20 Only a small amount of water sprinkling in the am.
  
- 6-24 Back flushed the #2 well. Need to do that to #1, but that will be another time.
