

Watering Setup Procedure 2021 Mid Aug

This year we will water once a week until August, then twice a week.

As of Mid Aug we will be using only 6 pods (water table has dropped alot)

Use the EVEN – ODD dates as to where to place the sprinklers.

IF you are setting up on an **EVEN - WEST** day of the month, stop the mowers rear wheel at the **Yellow** mark on the West end of the runway on EVEN days.

On **ODD - WEST** days of the month stop at the **Orange** mark.

There will be a YELLOW and an ORANGE lines painted near the center line of the West **AND** East ends of the runway (ORANGE being ODD).

When setting up on an **EVEN – WEST** or **ODD – WEST** day use the lines on the west end of the runway.

When setting up on an **EVEN – EAST** or **ODD – EAST** day use the lines on the east end of the runway.

There will also be some EVEN – EAST, ODD – WEST and ODD – EAST days.

Line the sprinklers up with the Orange Cones near the runway center line.

Configuration of the pods, TWO sections of three old pods. Total six pods.

I suggest you drag each section of pods to the runway and then connect them.

When you have it configured correctly, the West most pod should have a “W” on it and the East most pod should have an “E” on it.

The South East field area has an underground watering system.

We will NOT be using this for the rest of August.

Fill the gas tank, start the pump, move the choke and fuel levers to their South most position. Pump gate lock combo 1812 Mower shed lock combo 4545.
